## Document Available for Review

**Draft Data Summary Report for Soils  
NASA - Santa Susana Field Laboratory  
Ventura County, California**

NASA has submitted a Draft Data Summary Report to the Department of Toxic Substances Control (DTSC), which summarizes the results of extensive investigations of soil chemical contamination at 16 sites within the 405 acres of SSFL administered by NASA. This report is required under the terms of the December 2010 Administrative Order on Consent (AOC) between DTSC and NASA. Accurately defining the vertical and horizontal extent of chemical contamination at the NASA sites is essential information required to evaluate the strategies and methods needed to implement the final cleanup of contaminated soils.

DTSC is reviewing the reports to evaluate whether the data and analysis are adequate for use in upcoming cleanup decisions. DTSC anticipates completing review of the documents by August 30, 2015. During this period, public input is welcome and will be considered. Please email your input to one of the contacts listed below.
