Oakland, California 94612-5208

Subject: Buildings 030, 019 and 654.

Dear Mr. Lopez:

In reviewing the status of radiological buildings at SSFL, it appears that three ex-radiological buildings have been surveyed by ETEC but not yet had independent verification surveys performed nor have they been released for unrestricted use. They are...

**Building 030:** This building housed a Van der Graff accelerator. This building (including the neighboring B/641 loading dock) was surveyed in 1988. The survey report is attached. The building is currently occupied.

**Building 019:** This building housed a SNAP 10-A Flight System critical assembly. It was surveyed in 1988. The survey report is attached. The building is currently occupied.

**Building 654:** This building was known as the Interim Storage Facility and was used to store SRE equipment. It was demolished and excavated in 1984 and the remaining ground surveyed. The survey report is attached.

All these buildings are DOE-owned, and it is therefore requested that DOE contract with ORISE to perform an independent verification survey on these facilities.
As with prior ORISE surveys, ETEC intends to invite the State of California DHS/RHB to participate in these surveys and is providing the State with copies of the ETEC final surveys via this letter. Following ORISE surveys, facility release for unrestricted use will be sought from DOE/OAK with concurrence by the State DHS/RHB.

If you have any questions on the above material please contact the undersigned at (818) 586-6140 or e-mail to pdruther@rdyne.rockwell.com.

Very truly yours,

P. D. Rutherford, Manager
Radiation Protection and Health Physics Services
